linkedin.com/in/kolawole-iwalewa-ab556138b | github.com/kolawole22 | kolawole-portfolio.netlify.app

PROFESSIONAL SUMMARY

Mobile and full-stack engineer specialising in React Native, Expo and TypeScript, with three years of shipping cross-platform products from architecture through App Store and Play Store release. Sole developer of a two-sided travel marketplace across iOS, Android and an admin web dashboard. Previously sole engineer and platform lead for a multi-tenant engagement platform, and built native hardware bridges, payment integrations and CI/CD pipelines.

TECHNICAL SKILLS

Mobile: React Native, Expo, Expo Router, EAS Build/Update, NativeWind, Reanimated, Android Studio, Xcode
Frontend: React, Next.js, TypeScript, Vite, Tailwind CSS, TanStack Query/Router, Zustand, Redux
Backend & Data: Node.js, Express, Python, Django, REST APIs, PostgreSQL, MySQL, Drizzle ORM, JWT, WebSockets
Payments & Integrations: Stripe, Paystack, PayPal, RevenueCat, KinesteX, Nexgo SmartPOS SDK, Radar, Google Maps
DevOps: GitHub Actions, Google Cloud Build, Docker, Cloud Run, Artifact Registry, Cloud SQL, Nginx, PM2, DigitalOcean
Testing & Delivery: Jest, Vitest, Maestro, CI/CD, Git, App Store Connect, Google Play Console

PROFESSIONAL EXPERIENCE

Mobile Application Developer (Sole Mobile Engineer) | Afriplanora — Feb 2026 - Present

Contract | Remote | afriplanora.com | App Store | Google Play

- Shipped the iOS and Android app solo (React Native, Expo, TypeScript) for a two-sided travel marketplace: discovery, itineraries, booking and multi-currency checkout with Paystack, Stripe and PayPal across 5 service types. It has 120+ live listings and ~3,000 downloads across both stores.
- Designed and built the vendor platform (listing wizards, availability, cancellations and refunds, booking approval, QR check-in, earnings and payouts, team permissions) and, as sole developer, the admin web dashboard (React, Vite, TanStack) for users, services, KYC, earnings, complaints, broadcasts and team and logs.
- Launched the growth features: a referral programme with coin rewards, influencer cash payouts and push notifications with deep links, and co-built the Next.js website with the backend developer.
- Cut load times and data loss: made the home screen cold launch roughly 2-3x faster by caching its content on disk, built infinite scrolling for discovery and transaction history with server-side search and filters (transaction history first load ~4s to ~1s), capped uploaded images at 1600px, and fixed vendor edits that were silently saved only on-device by auto-saving to the backend with rollback. Backed by 2,000+ automated tests that run in CI on every PR.

Platform Lead / Software Developer | Proximity Communications — Nov 2025 - Sep 2026

Full-time | Remote | Web and Android

- Solely built and led a multi-tenant proximity-marketing platform (React, React Native, Node/Express, PostgreSQL, TypeScript) for brands, venues, consumers, students and promoters. It launched with its first brand client (2 campaigns, 100+ users) after a live product demo won the deal.
- Engineered the API across 28 domain modules: campaigns, promo codes and redemptions, venues, loyalty, referrals, games with leaderboards, campus recycling deposits, fraud signals, audit trails and CSV exports, plus Radar geofencing, Expo push notifications and pg-boss scheduled jobs.
- Automated delivery: Docker image built by Google Cloud Build, pushed to Artifact Registry and deployed to Cloud Run, with Cloud SQL, Secret Manager and 39 Drizzle migrations.
- Instrumented the system for production: Sentry, request-context logging, an OpenAPI spec, role-based access control and 39 unit, integration and contract test files.

Mobile Application Developer | RepMirror AI — Jul 2025 - Feb 2026

Contract | Remote | repmirror.ai | App Store | Google Play

- Released an AI fitness app (React Native, Expo, TypeScript) with camera-based rep counting and form analysis through the KinesteX motion-tracking SDK, and owned store configuration, builds, submissions and OTA updates. It has ~300 downloads.

- Extended it beyond AI form coaching with workout plans, schedules with reminders, session tracking, analytics, challenges, leaderboards, push notifications and RevenueCat subscriptions.
- Developed the Next.js marketing site and admin console: challenges and leaderboards, users, workouts and exercises, support, and ambassador-programme management with earnings and payouts.

Mobile, Web & POS Developer | Santilotto **Nov 2025 - Jun 2026**

Contract | Remote | santilotto.com | Mobile, Web and Android POS

- Built a live lottery platform solo across three codebases (200+ screens and routes): the customer mobile app (React Native), a responsive web app (React, Vite, TanStack) and admin and agent portals (game management, wallet, agent dashboards, POS terminal allocation, payout requests).
- Delivered lotto play and bet slip, peer betting, wallet funding, tickets and results, BetGames virtual games with secure token auth and WebSocket live support, plus the platform rules: a 15-minute inactivity auto-logout with cross-tab sync, a 10-minute draw cut-off and a live-synced game clock.
- Integrated the Android POS app with the Nexgo SmartPOS SDK through a custom Java-to-React Native bridge for thermal receipt printing and printer status, automated by an Expo config plugin that patches Gradle and registers the package.

Mobile & Full-Stack Developer | Trex Techies **Jun 2024 - Jul 2025**

Contract | Remote | flyttman.se

- **Flyttman (live Swedish moving marketplace with 99+ moving companies):** built the Next.js frontend (114 pages, fully localised in English and Swedish with next-intl) for four roles: customers, moving companies, drivers and admins. It covers multi-service quotations, bidding, orders, disputes with chat, ratings and tips, driver assignment, earnings and withdrawals.
- Implemented Flyttman's Stripe checkout, partial-payment webhooks and PDF invoice and email generation on the Express/MySQL backend, and deployed both on Loopia and DigitalOcean VPS with Nginx and PM2.
- **Ajoo.me (group-savings platform, pre-launch):** built the Expo mobile app for group wallets, contributions, slot swaps and cooperatives, with bank transfers and auto-debit through Terraswitch, QR codes and deep links, and contributed to the Express backend.
- **Spectrum (Osun State Government):** built a React Native tax-payment and compliance app and contributed to the agent dashboard.

IT Support / Software Developer (NYSC) | BUA Group **Jul 2023 - Jul 2024**

On-site national service | Group IT

- Provided day-to-day IT support across business operations, and designed, built and deployed a MySQL-backed inventory system for the Group IT Head that centralised tracking of laptops, printers and accessories across subsidiaries.
- Implemented role-based access and deployed the application during the final week of the placement.

EARLIER CONTRACT PROJECTS

Mobile Application Developer | IFAD - Farmers Marketplace **Dec 2023 - Apr 2024**

- Took over, completed and published a marketplace app connecting rural farmers with buyers and agricultural input dealers (Android).

Frontend Developer | King David Elites - Cream **Sep 2023 - May 2024**

- Contributed to an AI-search-powered real estate and automobile platform, including React/Next.js frontend and migration work.

EDUCATION

B.Sc. Mathematics, Federal University of Agriculture, Abeokuta **Apr 2018 - Jan 2023**
